

ProCrimp® 1380

Now available from Aeroquip for simple, fast crimping of most popular Aeroquip hose sizes and styles, including MatchMate Plus®

The ProCrimp® 1380 features an electronic control pad with 10 programmable, pre-set buttons for your 10 most popular hoses. Optional side mounted die cage holders are also shown in this view.

The ProCrimp® 1380 capability includes most Aeroquip hose styles thru -20 size including MatchMate Plus®.

Features:

- Fast, Quiet, Easy to use
- Crimp thru -20, 4-spiral hose
- Pre-set crimp settings
- Adjustable keypad entry
- Programmable electronic controls
- Easy to calibrate
- Upright design
- Standard work light
- Simple die cage insertion
- Full flow hydraulics w/spring return
- "Soft" retract position
- ENERPAC® hydraulics

Benefits:

- Minimizes training and mistakes
- Crimps popular hose styles
- Fast setup time
- Simplified crimping
- Minimal maintenance
- Minimal effort calibrating machine
- Easy hose insertion
- Easy to see work
- Save setup time
- Fast cycle time
- Minimum cycle distance & time
- Reliable/Serviceable/Standardized

Simple and Versatile

Aeroquip's ProCrimp® 1380 sets a new standard for simplified, fast crimping of hose assemblies. This machine can be set up in any shop, garage or work area to crimp 1 and 2 wire braid, 4 spiral, and many other hose styles offered by Aeroquip.

Electronic Controls

The electronic controls on the ProCrimp® 1380 have been designed to simplify all aspects of the crimping process by reducing the number of steps and time involved in setup and crimping of fittings to hose. This reduces not only the cost of labor in making an assembly but also minimizes the opportunity for costly errors. This means less time, less waste and more money in your pocket!

While any crimp setting can be easily entered into the ProCrimp® 1380 keypad, there are 10 "pre-set" keys on the keypad which can be programmed for your 10 most popular hose styles. When crimping any of these 10 styles you simply press the pre-set button for that hose, insert the appropriate die cage and you're ready to crimp!

ENERPAC® hydraulics provide quiet and fast operation.

MatchMate Plus® Ready!

The *ProCrimp*® 1380 is totally compatible with Aeroquip's popular MatchMate Plus hose assembly program. Matching and Mating hose to fittings and to the tooling in the *ProCrimp*® 1380 make hose assembly simpler than ever. Decals have been prepared to fit the *ProCrimp*® 1380 with all of the MatchMate Plus hose styles including the new MatchMate BLUE®!

Ease of Fitting Location

The standard work light on the *ProCrimp*® 1380 illuminates the top of the fitting being crimped in this upright crimp machine. The work area is highly visible due to the upright design of the *ProCrimp*® 1380. Viewing of the fitting during the crimping operation is easier than ever! And the ever popular FT1330XL "Oxley Locator" can be added to the die cages for use with MatchMate Plus TTC fittings for even easier location.

Quiet, Fast Machine Operation with Worldwide Service Available

The *ProCrimp*® 1380 uses an ENERPAC® 10,000 psi Hydraulic pump and cylinder which provide quiet, efficient crimping. When the power unit is on, the electronic display and work light are lighted to indicate setup for crimping. The pump doesn't actually begin to operate until the crimp toggle switch is activated, saving energy and motor wear.

In addition to Aeroquip's standard 1 year warranty against manufacturing defects for the entire machine, ENERPAC® extends this same type of warranty on the critical pump and cylinder components for life with extensive service capability in North America and around the world!

ENERPAC® is a registered trademark of Applied Power, Inc.
